

ELEVATION CAPITAL® VALUE FUND

The Value Fund is a Portfolio Investment Entity (PIE) that seeks to provide investors with long-term capital growth and income by directly investing in equities on a global basis, while at the same time adhering to a "Margin of Safety" investment philosophy. The strategy of the Fund is to mainly invest in shares of entities trading at a discount in relation to the entities' net asset value/intrinsic value*, with low debt levels**, which have a history of paying dividends and/or returning capital to shareholders and have some sort of economic moat e.g brands, franchises, other.

* Net Asset Value / Intrinsic Value – is also referred to as "Private Market Value". Collectively we define them as the value an informed buyer would pay to purchase assets with similar characteristics. We measure Net Asset Value/Intrinsic Value or Private Market Value by scrutinising on and off balance sheet assets, liabilities, and free cash flow. We also examine valuations and transactions in the public domain to formulate our view of possible future value.

** Low Debt Levels – can be assessed relative to tangible and/or intangible assets, free cash flow, the industry in which an entity operates, or relative to peers within an industry.

FUND PERFORMANCE (NET AND GROSS) VS. NZ CPI+5% PER ANNUM (GROSS) & MSCI ACWI (GROSS)

For comparative purposes we have detailed two informational benchmarks we consider relevant to underlying (and prospective) investors in the Value Fund. These are NZ CPI + 5% per annum (Gross Return) which we believe highlights to investors whether we are preserving and growing their real purchasing power overtime and the MSCI All Country World Index (ACWI) Gross Return Index in NZD terms. It is important to consider that our portfolio does not track or follow any index (refer the Funds Active Share statistics on page 2), and we consistently operate with conservative cash levels. We would also highlight that these two informational benchmarks are not provided for performance fee calculations as there are no performance fees charged or payable within/by the Fund.

** Total Expense Ratio Definition: Total Expense Ratio (TER) expresses the expense ratio for a fund or unit of a fund against the average NAV (of the fund or unit respectively) over a given period in the past. The TER should reflect the past record, and should not be an estimate for the present or future. In other words, the TER is the annual percentage reduction in investor returns that would result from operating costs if markets were to remain flat and the fund's portfolio were to be held and not traded during a period.
